

Proposta:

Proposição de Modelos de Desempenho e Disponibilidade para dar Suporte ao Planejamento de Infraestrutura mHealth usando Mobile Cloud:

Um estudo baseado em rendimento esportivo, em tempo real.

Propor um modelo de Disponibilidade e Desempenho para dar Suporte ao Planejamento de Infraestrutura mHealth usando Mobile Cloud Computing:

- Desenvolver um protótipo de aplicação mHealth para coletar dados do usuário;
- Realizar o monitoramento de saúde e desempenho de atletas, em tempo real, através do smartwatch;
- Propor um modelo de disponibilidade e desempenho do dispositivo smartwatch para uma arquitetura Mobile Cloud;
- Identificar quais os componentes de maior impacto na disponibilidade do smartwatch;
- Analisar diferentes cenários, considerando a possibilidade de melhora da disponibilidade e desempenho.
